Dialysis Session Intake & Anomaly Dashboard (Full Stack Workflow)

Express ✓
TypeScript ??
React ✓
MongoDB ✓

Requirements:

- Register
- Record session event
- Fetch "today's Schedule"
- Anomaly detection

Data Layer: Schema, indexes
embedding vs referencing ??

→ Organisation:
Dialysis Centers

→ Use Case:
Track patient's treatments
Session & Anomaly Detection

→ Users:
Nurses

Anomaly Detection (surfaced in the "today's Schedule ??")

- Excess interdialytic weight gain
- High post-dialysis Systolic BP
- Abnormal session duration

threshold? (Readme)

Frontend features:

→ Add
→ edit Notes

Intentional Ambiguity:

→ Filter "Anomalies patients"
handle loading, empty, error state API calls

Architecture Overview:
